### **Rotary seal feeder's tight seal ensures maximum feeding capacity**

Rotary seal feeder remains effectively sealed with spring-loaded tension bolts in the rotor assembly and packing glands at the feeder's inlet neck. Feeder's rotor assembly has generously sized pockets to provide increased capacity, allowing the unit to run at low speeds to minimize wear. Feeder is constructed from durable cast iron, making it suitable for abrasive materials, and is driven by a single-reduction, right-angle worm gear TEFC motor.
